Just like a *prelude* to a symphony, Dia-Prep Plus prepares you for the success of your root canal treatment. DiaDent Dia-Prep Plus is an **EDTA** cream with Urea Peroxide, used as an irrigation agent for chemo-mechanical preparation of the root canal.

advantages & effectiveness

- EDTA removes smear layer, softens dentin, and facilitates the removal of calcific obstruction
- Urea peroxide reacts with sodium hypochlorite to produce oxygen bubbles that flush out debris within the canal
- The lubricant medium facilitates instrument movement within the canal to eliminate instrument binding or breakage
- Unclogged dentin tubules and apical area permit better penetration of root canal medicaments and fillings

order information

Item # 2002-1100

- 2 x 6 g Dia-Prep Plus syringes
- 10 disposable tips
- 1 protective cap

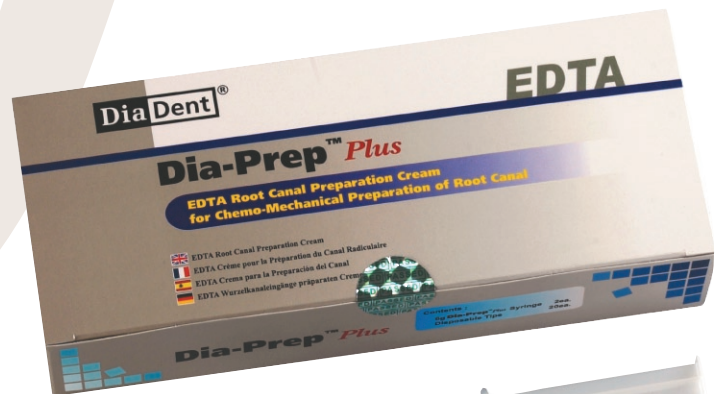

composition

- Ethylenediamine Tetraacetic Acid (EDTA) 15%
- Urea Peroxide 10%
